**Information and Software Technology** is an international technical journal which covers all aspects of software development and information processing, from state-of-the-art research, through software development and implementation, to information systems management. The journal gives equal emphasis to the

theories of software engineering and the application of information technology within organizations.

Papers published in the journal are drawn from current developments in areas such as: empirical and experimental analyses, software metrics, software processes and development methods,

project management, quality control and standards, object orientation, concurrency, human factors, testing, implementation techniques, database design and information systems, to provide a total view of informations systems technology.
